

## CLAIM AMENDMENTS

1. (Canceled).
2. (Previously Presented) A combination as in claim 38 wherein said wall is raised relative to the exterior surface of said tubular member.
3. (Previously Presented) A combination as in claim 38 wherein said aperture is threaded internally and said end of said connecting member is externally matingly threaded for engaging into said internally threaded aperture.
4. (Previously Presented) A combination as in claim 2 wherein said aperture is threaded internally and said end of said connecting member is externally matingly threaded for engaging into said internally threaded aperture.
5. (Currently Amended) A combination as in claim 38 further comprising including a lock nut along said end of said connecting member for locking said end of said connecting member into said aperture.
6. (Currently Amended) A combination as in claim 2 further comprising including a lock nut along said end of said connecting member for locking said end of said connecting member into said aperture.
7. (Currently Amended) A combination as in claim 3 further comprising including a lock nut along said end of said connecting member for locking said end of said connecting member into said aperture.
8. (Currently Amended) A combination as in claim 4 further comprising including a lock nut along said end of said connecting member for locking said end of said connecting member into said aperture.
9. (Currently Amended) A combination as in claim 38 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.
10. (Currently Amended) A combination as in claim 2 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.
11. (Currently Amended) A combination as in claim 3 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.
12. (Currently Amended) A combination as in claim 4 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

13. (Currently Amended) A combination as in claim 5 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

14. (Currently Amended) A combination as in claim 6 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

15. (Currently Amended) A combination as in claim 7 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

16. (Currently Amended) A combination as in claim 8 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

17. (Canceled).

18. (Canceled).

19. (Canceled).

20. (Currently Amended) A combination as in claim 3+8 wherein said aperture is threaded internally and said end of said connecting member is externally matingly threaded for engaging into said internally threaded aperture.

21. (Currently Amended) A combination as in claim 39 further comprising including a lock nut along said end of said connecting member for locking said end of said connecting member into said aperture.

22. (Currently Amended) A combination as in claim 18 further comprising including a lock nut along said end of said connecting member for locking said end of said connecting member into said aperture.

23. (Currently Amended) of said connecting member for locking said end of said connecting member into said aperture.

24. (Currently Amended) A combination as in claim 20 further comprising including a lock nut along said end of said connecting member for locking said end of said connecting member into said aperture.

25. (Currently Amended) A combination as in claim 39 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

26. (Currently Amended) A combination as in claim 18 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

27. (Currently Amended) A combination as in claim 19 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

28. (Currently Amended) A combination as in claim 20 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

29. (Currently Amended) A combination as in claim 21 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

30. (Currently Amended) A combination as in claim 22 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

31. (Currently Amended) A combination as in claim 23 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

32. (Currently Amended) A combination as in claim 24 wherein said tubular member further having a stop member having a round shape projects internally at about the middle of said tubular member.

33. (Previously Presented) The combination of claim 38, wherein said end of said connecting member is positioned within the confine of said tubular member in direct contact with said conduit.

34. (Previously Presented) The combination of claim 38, wherein each of said ends of said tubular member is externally threaded for receiving said conduit.

35. (Previously Presented) The combination of claim 38, wherein each of said ends of said tubular member further having an opening through said tubular member, said opening is internally threaded to receive a set screw for securely positioning said conduit.

36. (Canceled).

37. (Previously Presented) The combination of claim 38, wherein said aperture is generally perpendicular to said longitudinal axis of said tubular member.

38. (Currently Amended) A combination of a coupling member, an electrical wire-carrying conduit ~~having opposite ends~~, and a connecting member for positioning and securing said conduit to a remote supporting structure, comprising wherein:

an electrical-wire conduit having opposite ends;

said a coupling member receiv~~ing~~es and support~~ing~~s said conduit, said coupling member comprises~~ing~~a tubular member having a longitudinal axis and at least one end, said end

receivings one end of said conduit along said longitudinal axis, and said tubular member having a wall containing an aperture adapted to facing said the remote supporting structure; and  
said a connecting member having opposite ends, one end of said connecting member securely engaging said aperture in said wall of said tubular member, the opposite end of said connecting member extending outwardly beyond said wall and adapted to securely engage said the remote supporting structure, to securely hold and support said coupling member and said conduit in a selected position.

39. (Currently Amended) A combination of a coupling member, a pair of electrical wire-carrying conduits, ~~each conduit having opposite ends~~, and a connecting member for positioning and securing a said pair of conduits to a remote supporting structure, comprising wherein:

a pair of electrical wire-carrying conduit, each conduit having opposite ends;  
said a coupling member receivings and supportings said conduits, said coupling member comprises an integral tubular member having a longitudinal axis and a generally cylindrical wall surrounding an interior space and opposed axially aligned ends, each of said ends receivings one end of one of said pair of conduits along said longitudinal axis, and said tubular member having an aperture through said cylindrical wall into said interior space adapted to facing said the remote supporting structure; and  
said a connecting member having opposite ends, one end of said connecting member securely engaging said aperture in said wall of said tubular member such that said end of said connecting member extends into said interior space to securely engage said ends of said conduits being received in said coupling member, the opposite end of said connecting member extending outwardly beyond said wall and adapted to securely engage said the remote supporting structure, to securely hold and support said coupling member and said pair of conduits in a selected position.

40. (Currently Amended) The combination of claim 38 wherein said tubular member further having a wall surrounding an interior space, wherein said aperture receivings said end of said connecting member within said interior space.

41. (Previously Presented) The combination of claim 38 wherein said conduit further having a longitudinal axis coaxially aligned with said longitudinal axis of said tubular member.
